Hospital furniture from Stieglmeyer

Beds and furniture for use in hospitals must cover a great spectrum of requirements. Safety in everyday use is the key consideration. Outstanding hygiene properties are important to win the battle against drug-resistant superbug infections. Patients' recovery should be supported through high comfort. Nursing staff rely on easy ergonomic bed controls.

Stieglmeyer has been successfully working to meet these requirements for many decades and to provide value for money products. The family firm from Herford has long been a pioneer of many core areas of bed development, and still is today. The design department can look back on more than forty years' experience with machine washable hospital beds.

The Stieglmeyer catalogue contains beds for both special mobilisation or intensive care requirements as well as models offering an entire modular system for customisable configurations. This makes it possible to meet the individual needs of every institution down to the last detail. The quality of Stieglmeyer is characterised by lifelong support and 15 years spare part availability. Further service offers can be requested from our local partners.

Hospital beds from Stieglmeyer introduce a new feeling of well-being into the daily routine of hospital units.
